3. Create the Store

This step is best carried out using the Sync site wizard. These instructions are retained here for reference only.

After the sync sites have been set up, there are three approaches to creating and configuring the store that will be operated on that site.

- Manually create a store this method is suitable if you are creating only a handful of stores
- Create a store for an existing customer
- Create stores by cloning another sync store if you're creating a larger number of stores, then it is more appropriate for the mSupply Support Team to use footrunner code

Manually create store

1. On mSupply desktop go to **Special > Stores > New Store**

New store

2. Enter the Store Code and the Store Name

Organization name Address line 1	nobilestore Mobile Store 1	General	Preferences	Logo	Sync
Name M Organization name Address line 1		store			
Organization name Address line 1	Mobile Store 1				
Address line 1					
Address line 2					
Address line 3					
Address line 4					
Address line 5					
Postal/Zip Code					
• The St will re	itore Name ecognise. le Store	can not inclu needs to be 1 is not like	something		

- 3. Configure items visibility
- 4. Configure synchronisation settings
- 5. Configure store visibility to other stores

Create a store for an existing customer

This method is only useful if you already have a customer that you want to convert to a store. We must first **clone** the existing customer then **merge** the new store with the existing customer.

Cloning the existing customer to a store

1. The mSupply Support Team will use the footrunner code "store_create_from_name" to **clone** the original store. We will need to provide:

• •

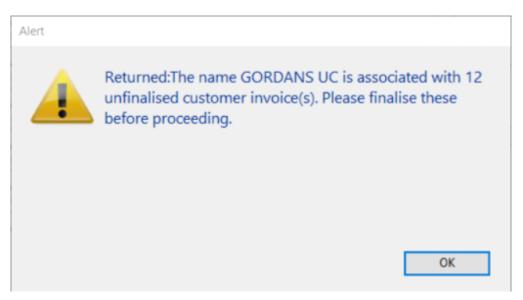

- 1. Name **ID** (not name **Code**) to create the store for (must not be blank or already a store)
- 2. Store mode for new store (one of store, dispensary or report). Almost always, this should be store
- 3. Sync ID for site on which the new store will be Active (optional; if left blank, will default to the current site ID)
- 2. Configure items visibility
- 3. Configure synchronisation settings
- 4. Configure store visibility to other stores

Merging the new store with the existing customer

Using the mSupply Desktop User Guide merge the new store name with the existing customer name. There is some footrunner code that can facilitate this for multiple sites.

Before merging all unfinalised Customer Invoices from supplying stores to the existing customer must be finalised. On a system with supplying stores on multiple sync sites, this can take a long time. Start early, and if possible, ask the supplying stores to refrain from creating any new Customer Invoices until the merging is done...

If you try to do the merge before finalising all customer invoices, you will get an error message, and the merge will not proceed

Create store by cloning another sync store using sync_clone_sync_site

First manually create and appropriately configure a single store.

Make *sure* the relevant sync sites have been created and then, for **EACH** store:

- 1. The mSupply Support Team will use the footrunner code sync_clone_sync_site to clone the original store. We will need:
 - 1. Sync ID for source sync site
 - 2. Sync ID for clone sync site
 - 3. Sync version (v1 for desktop, v3 for mobile)
 - 4. Decision on whether the cloned store will have 'group' store visibility (visible to all other stores with the same supplying store) or not
 - 5. Decision on whether to also clone locations, transactions, stock, requisitions. (almost always **NO**!)
 - 6. new **store** code *and* name for each cloned store

- 7. new user name and password for the each cloned store's default user
- 2. If there are actually existing customers for each of these stores, you will then need to merge the existing customer name with the new store
- 3. The new store will have the same item visibility configuration as the original store. Review, and if necessary, configure items visibility
- 4. The new store will have the correct 'basic' sync settings. Review, and if necessary, configure synchronisation settings
- 5. The new store will have the correct 'basic' store visibility settings, including, if you have selected it, 'group' store visibility. Review, and if necessary, configure store visibility to other stores
