

Adverse Drug Reaction Reporting

From version 7.1 mSupply mobile includes the ability to report on Adverse Drug Reactions It is able to be used with AEFI (Adverse Events From Immunisation) reporting.

Set up

Entering an adverse reaction report

To report, a patient must be entered. If you are at the facility where the drug was administered, the patient should already be in the system.

If the patient isn't in the list:

1. Tap the **Lookup Patient** button to query the central server to retrieve their name.
2. If you still can't find them (which should be rare), then you can tap **New Patient** to enter their details.

Once the patient is found, tap the **plus** icon in the ADR column to add an adverse event report for that patient.

The screenshot shows the 'Dispensing' screen in the mSupply application. At the top, there's a header with the mSupply logo and a sync status message: 'SYNC ERROR. LAST SYNC 19.3.2021'. Below the header, there are tabs for 'Patients' and 'Prescribers'. A search bar contains the text 'g, j -d 1989'. To the right of the search bar are buttons for 'New patient' and 'Lookup patient'. Below these is a table with columns: CODE, LAST NAME, FIRST NAME, D.O.B, HISTORY, ADR, EDIT, and DISPENSE. The first row of data shows a patient named 'Griffin, Joshua' with a date of birth of '25 Jun 1989'. The 'HISTORY' column has a circular arrow icon, 'ADR' has a plus icon, 'EDIT' has a pencil icon, and 'DISPENSE' has a right arrow icon. The rest of the table is empty.

CODE	LAST NAME	FIRST NAME	D.O.B	HISTORY	ADR	EDIT	DISPENSE
	Griffin	Joshua	25 Jun 1989				

What is shown on the form is configurable on the server. If more than 1 adverse reaction form has been defined, you will be shown a list of forms, and you need to choose the appropriate one before proceeding. If only 1 form has been configured, you will be taken directly to the form to enter the adverse event details.

The fields you enter, their order and the allowed values are all configured on the server, so will vary for each installation.
