

Mobile Settings

The Mobile Settings is where an user with appropriate permissions can carry out certain administration tasks including:

- Editing the Sync URL and Sync Password for your mobile store
- View the Realm Explorer
- Export Data (i.e. export your database file).

Permission to Edit Mobile Settings

To edit mobile settings, the user must have the **View/Edit Preferences** permission set for the mobile store on the Central server - refer Setting up admin access to the device settings.

Access Mobile Settings

Users with the appropriate permissions can access the mobile **Settings** on the bottom right of the main screen.

Clicking this button opens the **Settings** window.

Editing Sync URL or Sync Password

Be careful when editing this, as synchronisation will not work if the **Sync URL** or **Sync Password** do not match what is

2025/11/04 08:49 3/4 Mobile Settings

set on the primary server.

When edited, the following warning will appear:

For changes to occur, click the **Save Changes** button.

When prompted, re-enter your password to confirm the changes.

Export data to backup mSupply Mobile database

For support purposes, it may be necessary to recover a backup of the mSupply Mobile database from the device. Click **Export Data** button to generate the backup. You will get a toast notification saying *Exported data file*.

An admin worker will then be able to recover this backup file from **Download** > **mSupplyMobile_data** folder.
