

Vaccine Dispensing Setup

Store settings on your central server

Ensure that your store has visibility of at least one item that is a vaccine

Add item...

Type: normal

Item code:

Item name:

General | Stores | Master lists | Barcodes

Units: None

Category 1:

Category 2: None

Category 3: None

Department: None

Default shelf location:

Default pack size: 1

Default weight: 0

Price list:

Non stock item:

Default customer:

Is a vaccine?

Doses: 10

Restricted to: None

VEN Category

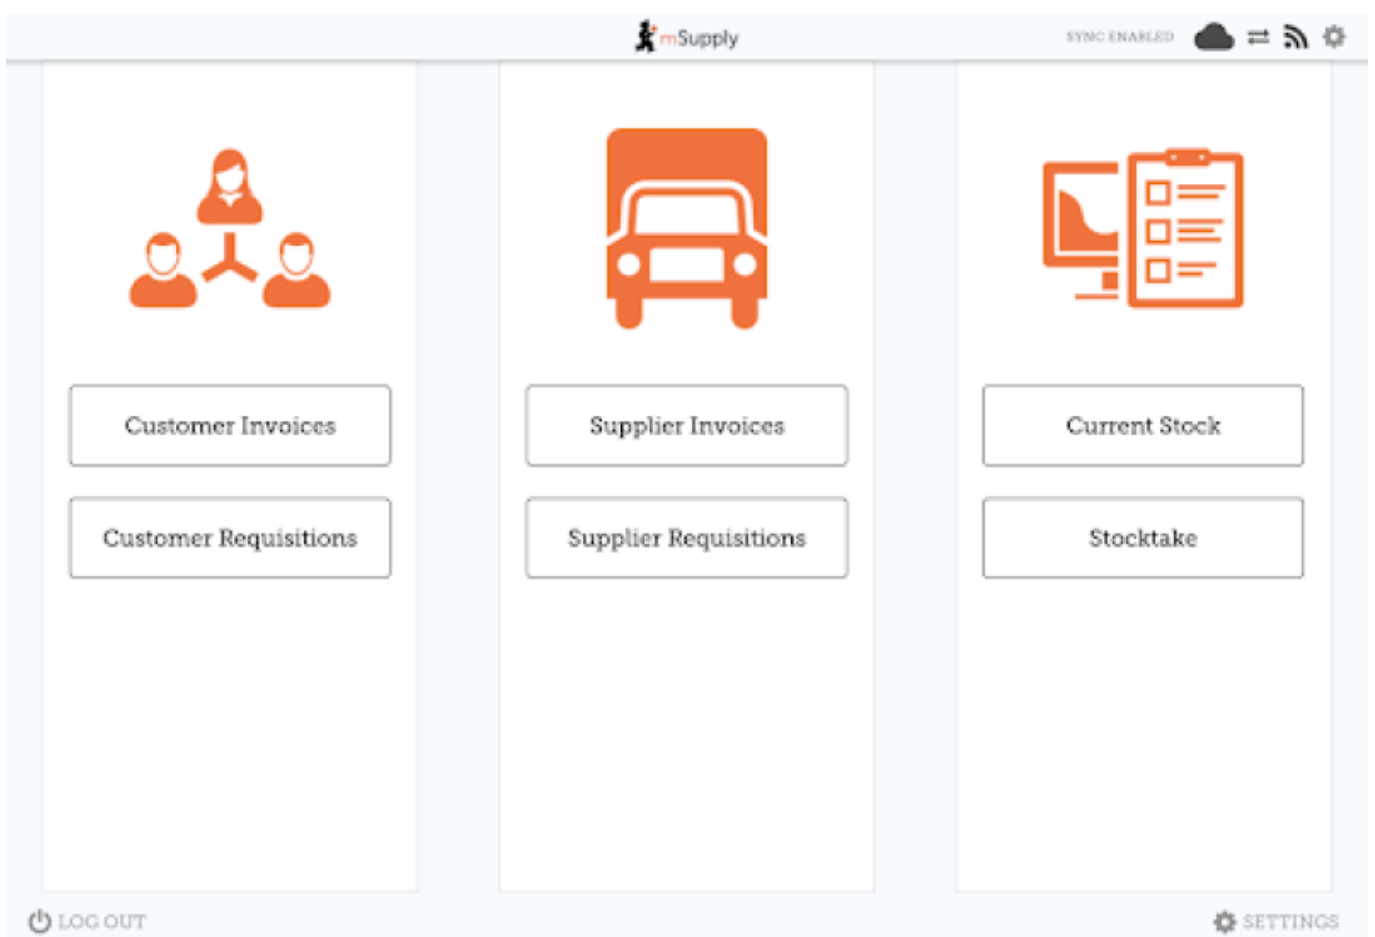

- Not assigned
- Vital
- Essential
- Necessary

Stock category

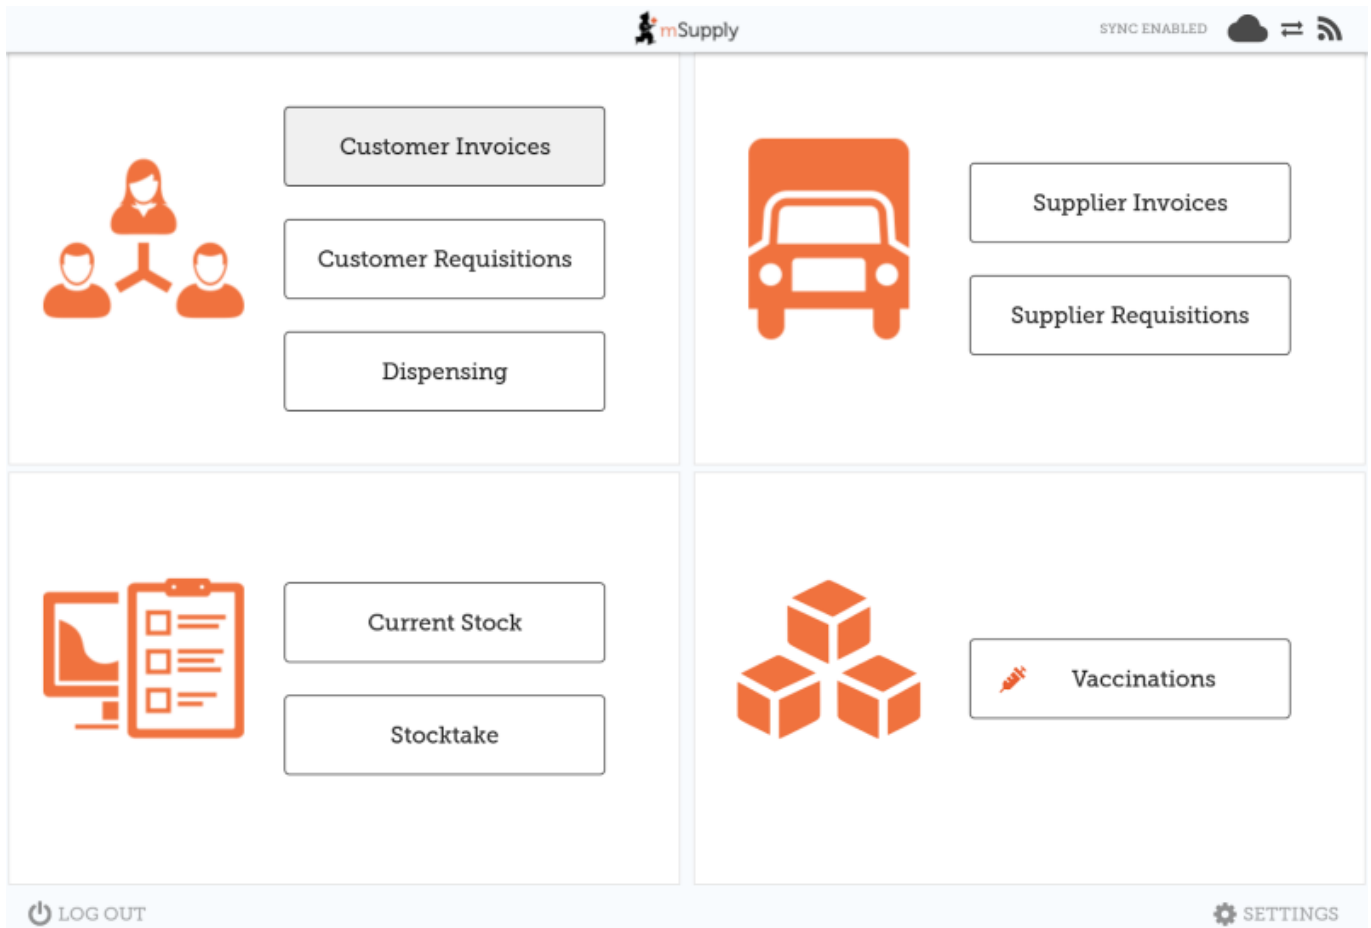

- Normal stock
- Critical stock
- Essential drug

Cancel | OK & Next | OK

If you want to record when a patient has refused a vaccine, you need to create a patient event. Otherwise, no record will be created.

Log in and synchronise once, and then your interface will show vaccine dispensing as an option:

Patient Extra Information Setup

We use the JSON-Schema standard to define both what information can be shown, and the constraints on that information. Constraints can include:

- If information is compulsory
- The type of value (e.g. only a number)
- Minimum and Maximum values
- Default values

Below is an example of a JSON schema. The schema and the resulting user interface can be viewed [here](#)

Example Schema

```
{
  "type": "object",
  "title": "Extra information",
  "properties": {
    "respondentContactData": {
      "title": "Respondent Contact Data",
      "description": "Contact data of the respondent if the respondent is
```

```
not the patient.",
  "type": "object",
  "properties": {
    "firstName": {
      "title": "First Name",
      "description": "The first name of the respondent",
      "type": "string",
      "maxLength": 2,
      "errorMessage": "Hey! that names way to long, buddy!"
    },
    "lastName": {
      "title": "Last Name",
      "description": "The last name of the respondent",
      "type": "string",
      "minLength": 50,
      "errorMessage": "Hey! that names way to short, buddy!"
    },
    "relationshipToPatient": {
      "title": "Relationship to patient",
      "description": "The relationship between the respondent and
patient",
      "type": "string",
      "enum": [
        "Mother",
        "Father",
        "Sister",
        "Brother",
        "Aunty",
        "Uncle",
        "Grandmother",
        "Grandfather",
        "Friend/Neighbour",
        "Other"
      ]
    }
  },
