

Vaccine Dispensing Setup

Store settings on your central server

Your store must be set as a dispensary:

Ensure that your store has visibility of at least one item that is a vaccine:

Add item...

Type: normal

Item code:

Item name:

General | Stores | Master lists | Barcodes

Units: None

Category 1:

Category 2: None

Category 3: None

Department: None

Default shelf location:

Default pack size: 1

Default weight: 0

Price list:

Non stock item:

Default customer:

Is a vaccine?

Doses: 10

Restricted to: None

VEN Category

Not assigned

Vital

Essential

Stock category

Normal stock

Critical stock

Essential drug

Cancel | OK & Next | OK

If you want to record when a patient has refused a vaccine, you need to create a patient event. Otherwise, no record will be created:

Code.	Description	Event type	Unit
NT	Note	DS	
PCD	Patient clinical data	OB	
RV	Refused vaccination	OB	

Code:

Description:

Event type:

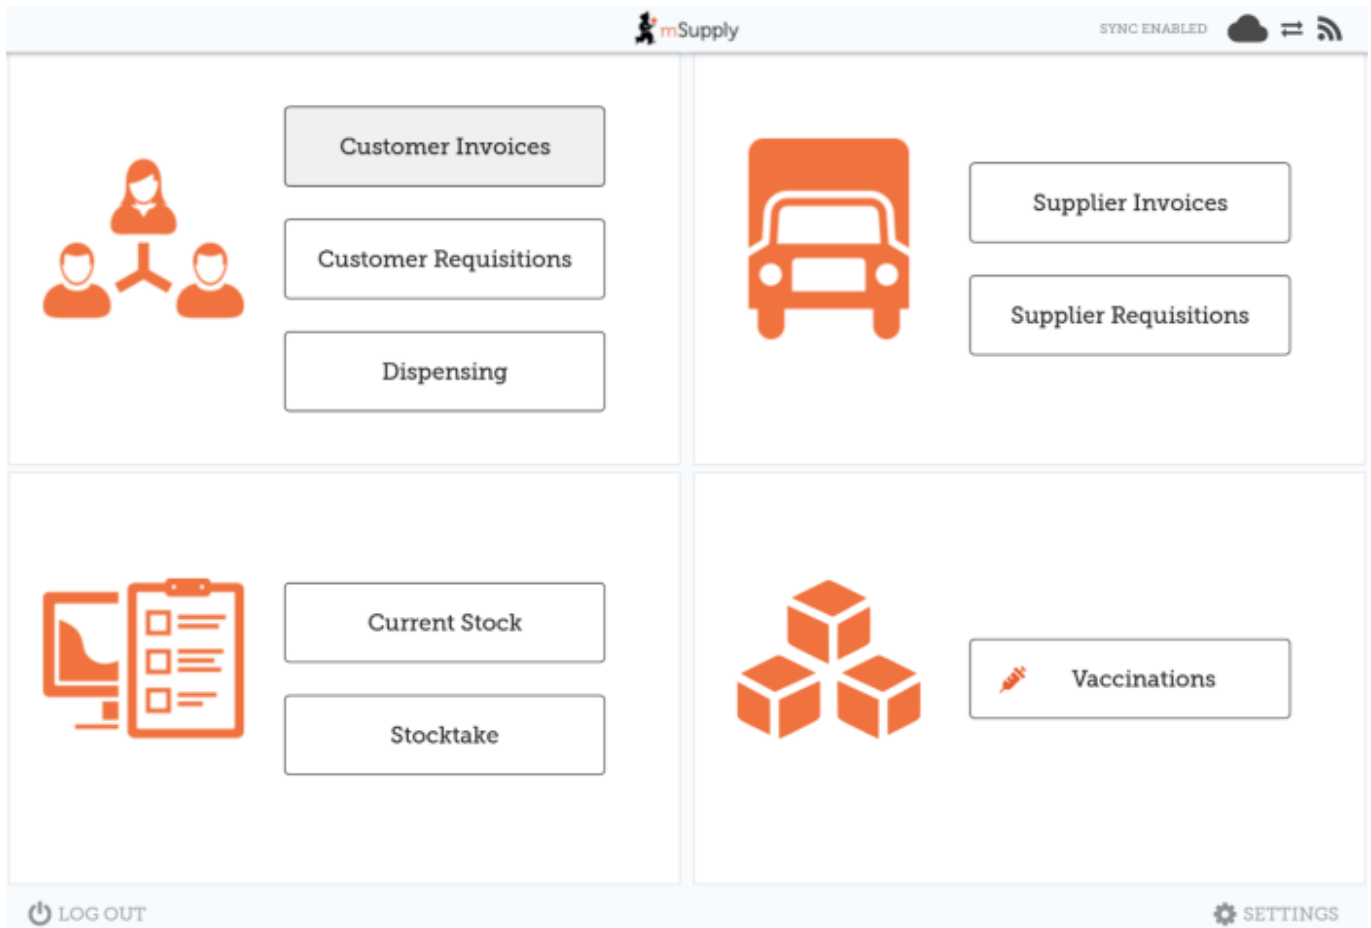

Units:

If you want to record extra patient information during vaccinations, get in contact with The mSupply Foundation as we have no interface for you to create the forms, yet.

Once complete (and after synchronisation), your mSupply mobile interface will look like this:

Log in and synchronise once, and then your interface will show vaccine dispensing as an option:

Patient Extra Information Setup

We use the JSON-Schema standard to define both what information can be shown, and the constraints on that information. Constraints can include:

- If information is compulsory
- The type of value (e.g. only a number)
- Minimum and Maximum values
- Default values

Once an agreed set of information has been defined, contact us to upload the form onto your server. In future versions of mSupply you will be able to do this process yourself.

Below is an example of a JSON schema The schema and the resulting user interface can be viewed [here](#)

Example Schema

```
{
  "type": "object",
  "title": "Extra information",
  "properties": {
    "respondentContactData": {
      "title": "Respondent Contact Data",
```

```
    "description": "Contact data of the respondent if the respondent is not the patient.",
    "type": "object",
    "properties": {
      "firstName": {
        "title": "First Name",
        "description": "The first name of the respondent",
        "type": "string",
        "maxLength": 2,
        "errorMessage": "Hey! That name is way too long, buddy!"
      },
      "lastName": {
        "title": "Last Name",
        "description": "The last name of the respondent",
        "type": "string",
        "minLength": 50,
        "errorMessage": "Hey! That name is way too short, buddy!"
      },
      "relationshipToPatient": {
        "title": "Relationship to patient",
        "description": "The relationship between the respondent and patient",
        "type": "string",
        "enum": [
          "Mother",
          "Father",
          "Sister",
          "Brother",
          "Aunty",
          "Uncle",
          "Grandmother",
          "Grandfather",
          "Friend/Neighbour",
          "Other"
        ]
      }
    }
  },
  "patientClinicalData": {
    "title": "Patient Clinical Data",
    "description": "The patient's clinical data",
    "type": "object",
    "properties": {
      "comorbiditiesImmunocompromised": {
        "title": "Comorbidities / Immunocompromised",
        "description": "The patient's comorbidities",
        "type": "string",
        "enum": [
          "Diabetes",
```

```

    "Hypertension",
