

Vaccine Dispensing Setup

Store settings on your central mSupply server

Your store must be set as a dispensary (go to *Special* > *Show stores* and double-click on your store):

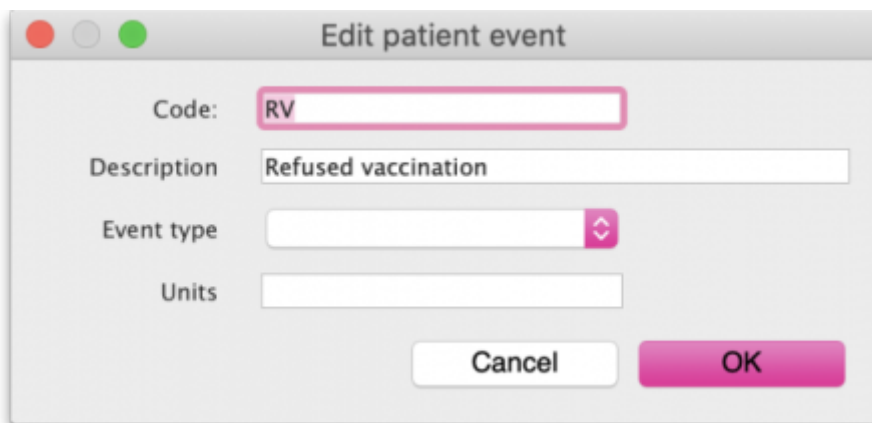

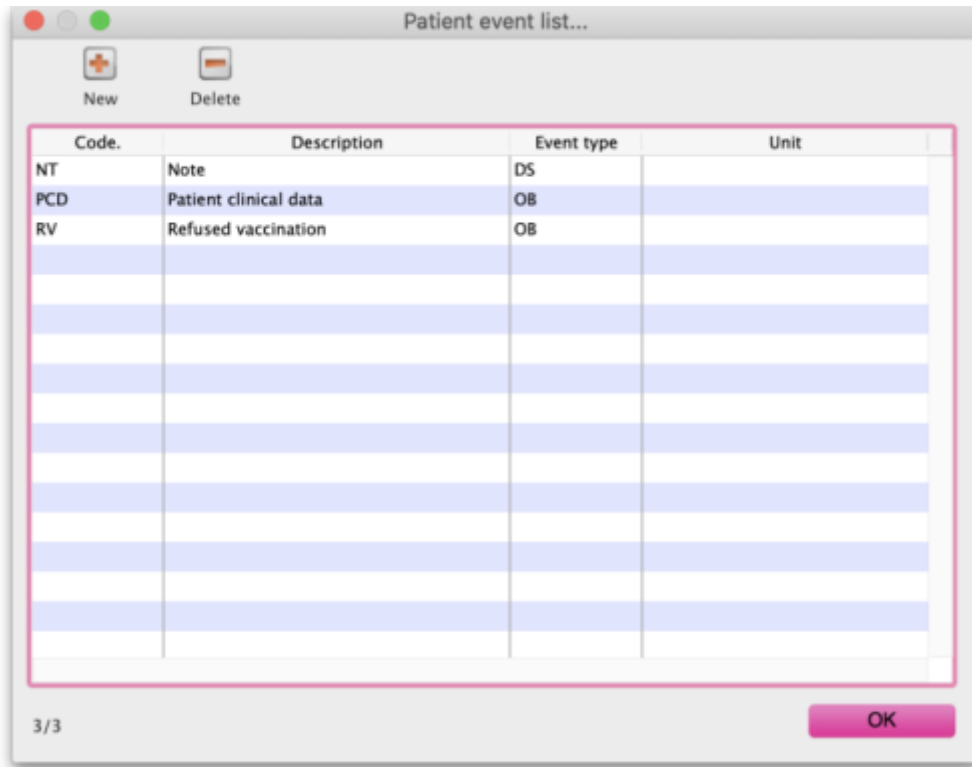

Ensure that your store has visibility of at least one item that is a vaccine:

The screenshot shows the 'Add item...' form with the following fields and options:

- Type: normal
- Item code: [empty]
- Item name: [empty]
- General tab selected
- Units: None
- Category 1: [empty]
- Category 2: None
- Category 3: None
- Department: None
- Default shelf location: [empty]
- Default pack size: 1
- Default weight: 0
- Price list:
- Non stock item:
- Default customer: [empty]
- Is a vaccine?:
- Doses: 10
- Restricted to: None
- VEN Category:
 - Not assigned
 - Vital
 - Essential
 - Necessary
- Stock category:
 - Normal stock
 - Critical stock
 - Essential drug

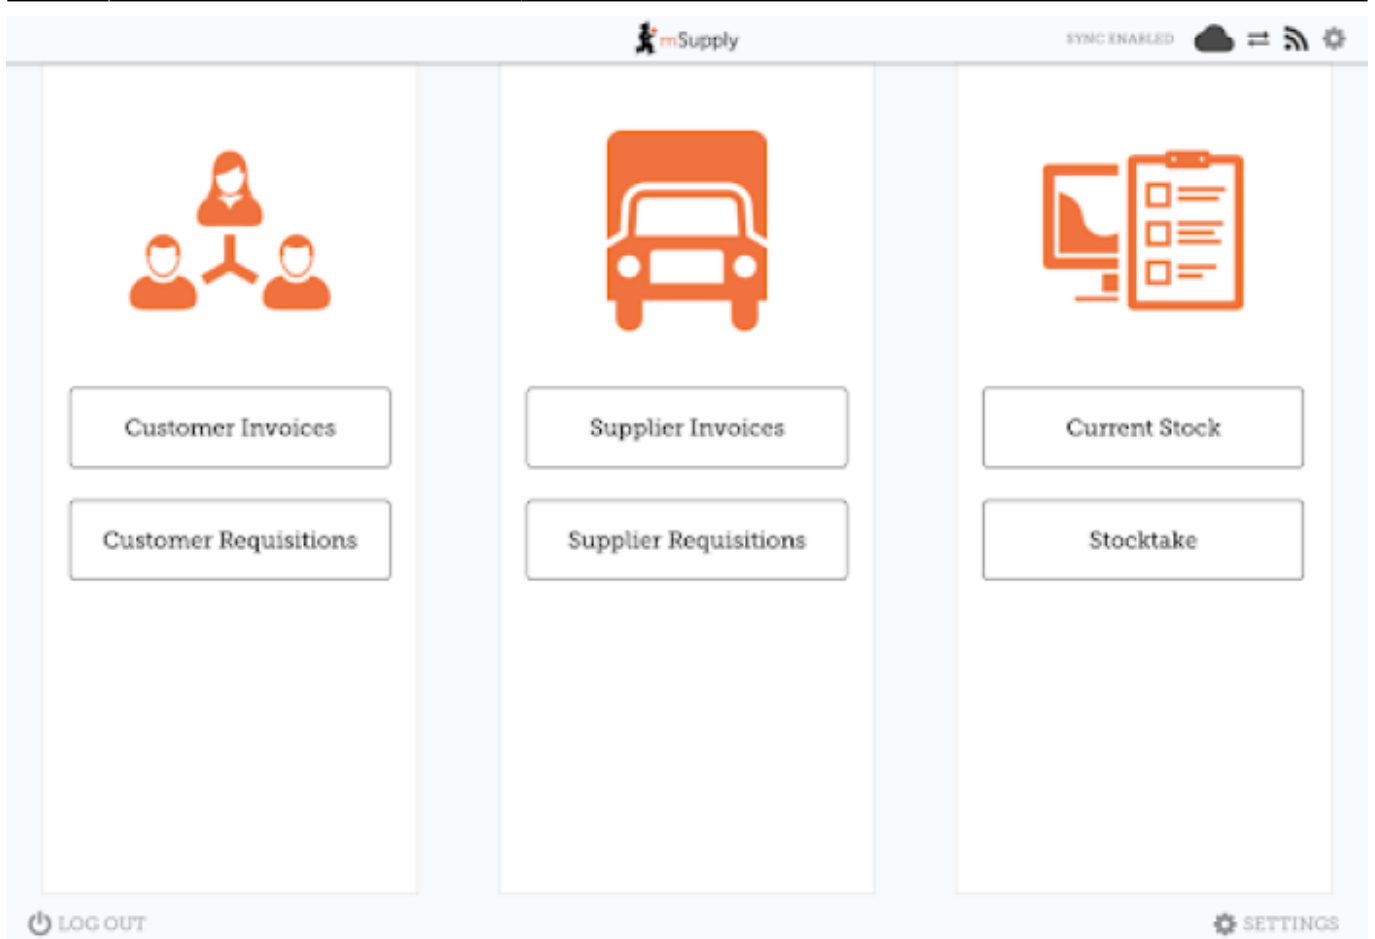

Buttons at the bottom: Cancel, OK & Next, OK

If you want to record when a patient has refused a vaccine, you need to create a patient event. Otherwise, no record will be created:

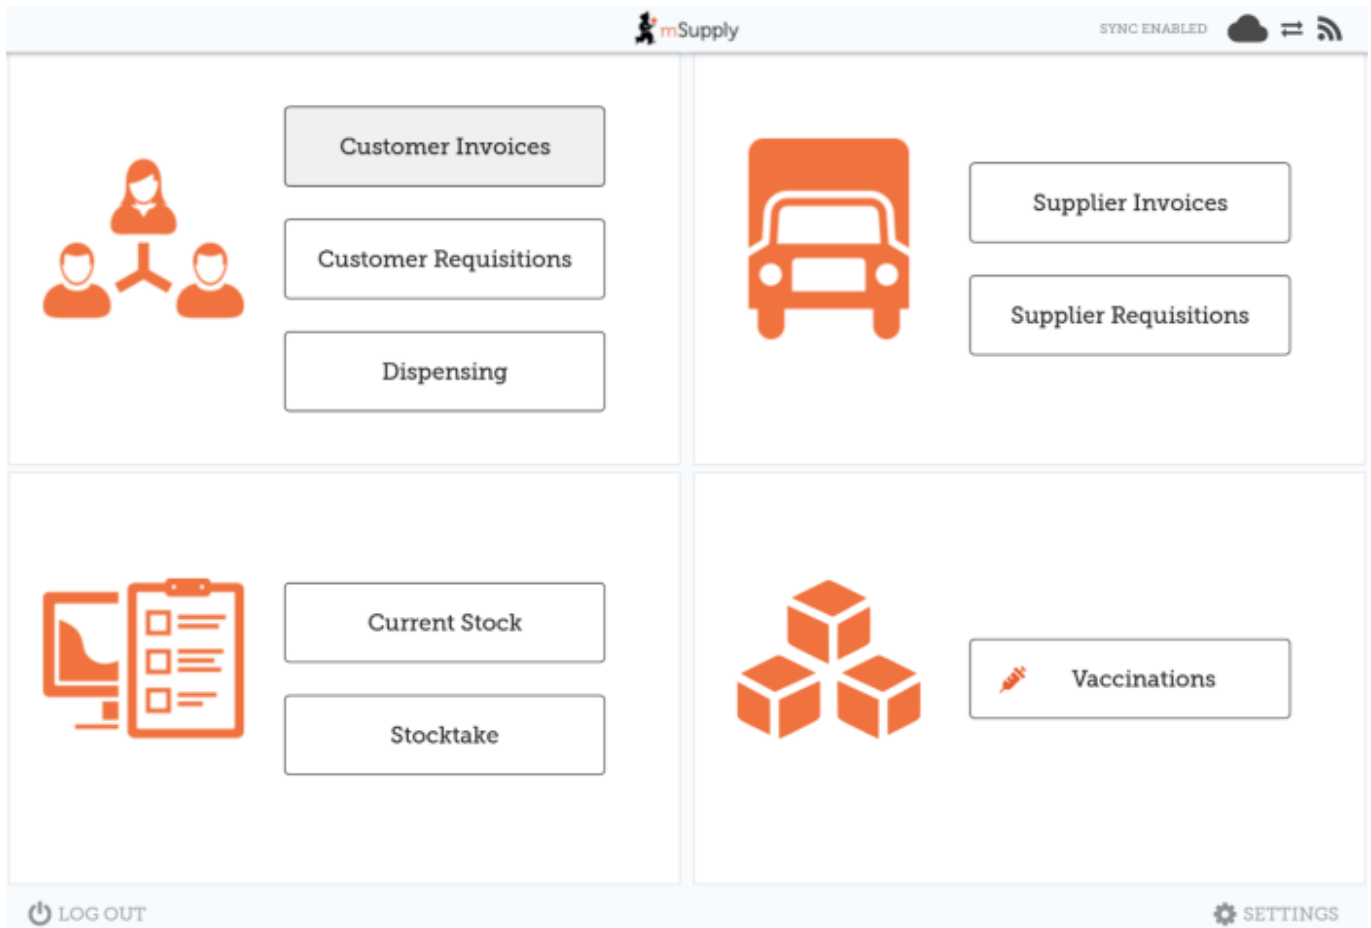

If you want to record extra patient information during vaccinations, get in contact with The mSupply Foundation as we have no interface for you to create the forms, yet.

[The standard mSupply mobile interface looks like this:](#)

After completing the setup described above, log in to mSupply mobile and synchronise once, and then your interface will look like this, now showing vaccine dispensing as an option:

Patient Extra Information Setup

We use the JSON-Schema standard to define both what information can be shown, and the constraints on that information. Constraints can include:

- If information is compulsory
- The type of value (e.g. only a number)
- Minimum and Maximum values
- Default values

Once an agreed set of information has been defined, contact us to upload the form onto your server. In future versions of mSupply you will be able to do this process yourself.

Below is an example of a JSON schema The schema and the resulting user interface can be viewed [here](#)

Example Schema

```
{
  "type": "object",
  "title": "Extra information",
  "properties": {
    "respondentContactData": {
      "title": "Respondent Contact Data",
```

```
    "description": "Contact data of the respondent if the respondent is not the patient.",
    "type": "object",
    "properties": {
      "firstName": {
        "title": "First Name",
        "description": "The first name of the respondent",
        "type": "string",
        "maxLength": 2,
        "errorMessage": "Hey! That name is way too long, buddy!"
      },
      "lastName": {
        "title": "Last Name",
        "description": "The last name of the respondent",
        "type": "string",
        "minLength": 50,
        "errorMessage": "Hey! That name is way too short, buddy!"
      },
      "relationshipToPatient": {
        "title": "Relationship to patient",
        "description": "The relationship between the respondent and patient",
        "type": "string",
        "enum": [
          "Mother",
          "Father",
          "Sister",
          "Brother",
          "Aunty",
          "Uncle",
          "Grandmother",
          "Grandfather",
          "Friend/Neighbour",
          "Other"
        ]
      }
    }
  },
  "patientClinicalData": {
    "title": "Patient Clinical Data",
    "description": "The patient's clinical data",
    "type": "object",
    "properties": {
      "comorbiditiesImmunocompromised": {
        "title": "Comorbidities / Immunocompromised",
        "description": "The patient's comorbidities",
        "type": "string",
