3. Configuring mSupply Mobile on the device

Initialising the store

After installing the mSupply Mobile app, you must do an initialisation of the data for the store that the tablet is going to be used in. On opening the mSupply Mobile app, the first screen looks as follows:

The image shows the first screen of the mSupply Mobile app. At the top, there is a logo featuring a black silhouette of a person running with a red cross, followed by the text "mSupply". Below the logo, there are three input fields with labels: "Primary Server URL", "Sync Site Name", and "Sync Site Password". Each label is in a small, light blue font. Below these fields, there is a small icon of a cloud with a Wi-Fi symbol next to it. At the bottom of the screen, there is a grey button with the text "Connect". In the bottom right corner, there is a small version number "v2.1.0-rc7".

You must enter:

- The correct URL for your mSupply server, usually using SSL/HTTPS protocol for security, e.g <https://yoursite.msupply.org>
- Sync site name as configured on the Primary Server.
- Password for the sync site name as configured on the Primary Server

Connect

Once you have entered the information, click “Connect” to start sync:

Initialising...

Initialisation can take between 1 and 15 minutes, depending on the number of records on the server related to the site being synced. Once the server has found all the records to sync, mSupply Mobile will start pulling them adaptively between 20 and 500 records at a time depending on the connection

speed. If connection is lost or you closed the app, you can resume sync where it stopped by entering the exact same details. It will start again from scratch if you get it wrong before getting it right again!

Logging in to the store

Once complete, you will be taken to the login screen. For guidance beyond here see the [mSupply Mobile usage guide](#).

Limiting Initial Sync Record Count

If the amount of records to sync is large (say around 50,000) it may take hours to sync, particularly on a *poor* internet connection. For this reason it is possible in mSupply to limit the amount of records up to a specified amount of months ago.

The screenshot shows the 'Edit store' dialog box. At the top, there are four tabs: 'Visibility', 'Synchronization', 'Custom fields' (which is selected), and 'Master Lists'. Below the tabs, there are two buttons: 'New line' (with a plus icon) and 'Delete line(s)' (with a minus icon). The main area is a table with two columns: 'Field label' and 'Field value'. The first row has 'syncMonths' in the 'Field label' column and '3' in the 'Field value' column. There are several empty rows below. At the bottom right, there are 'Cancel' and 'OK' buttons.

1. You need to change the store synchronisation type from “collector” to “active” or “none” to unlock adding custom data
2. Add a custom data row with “Field label” `syncMonths` and the numeric value desired in “Field value”
3. Change the store synchronisation type back to collector

Now when you do initial sync, the store will only get transactions and stock takes for as far back as specified from the current date.
