4. Configuring the Store

4.01. Making items visible to the new store using a Master List

1. Click on the **Master Lists** tab and select at least one Master List.

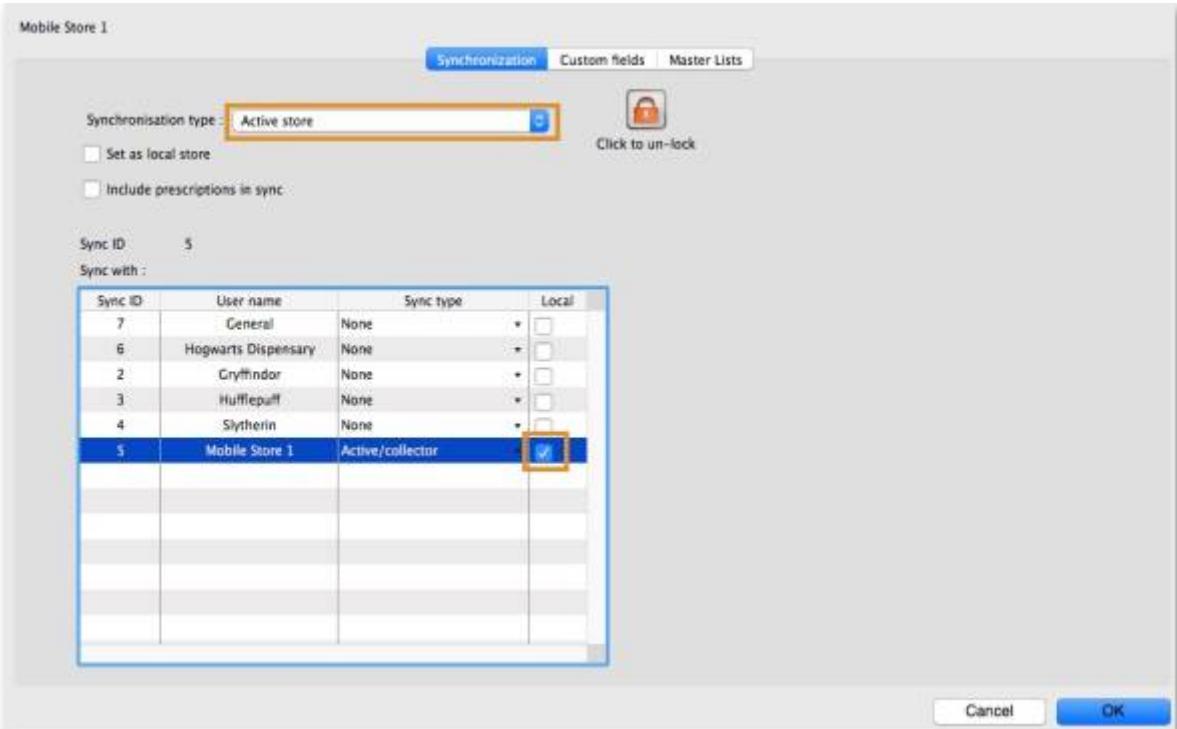

2. Click **OK**
3. Click **OK** again

4.02. Setting up correct synchronisation settings

If you have used `store_create_from_name` for creation of the store, and you have specified the sync site that the store will be **Active** on, then all you need to do here is:

- Change the Synchronisation type for this store on the Primary Server to **Collector** if so desired (normally the case)
 - Configure this new store's Sync type to be **Transfer** or **Active/Collector** for any other sync sites that need to deal with this store.
1. Edit store synchronisation settings (**Special > Show Stores >** Double-click on store **> Synchronisation > Click to Unlock**, enter code to edit):
 2. In the table below, in row of the Sync site that was created for this store, tick the tickbox in the **Local** column. This will automatically change the Sync type for that site to Active/Collector.

3. Set **Synchronisation type** at the top to Collector
4. Click **OK**

4.03. Make Store visible to other Stores

1. Edit the 'name' associated with the Store and configure visibility to other Stores appropriately
