

# mSupply Table

This is a custom panel which will need to be installed on your server. Contact mSupply support if this panel is not available to you. The mSupply table is an extension of the bundled Table plugin, which adds \* clickable actions to cells which update filter values \* a button which allows exporting the data direct to excel (requires the msupply-dashboard-app plugin also )

Be aware that it also removes the Filter functionality of the bundled table plugin.

The screenshot shows the 'Item Stock' interface. At the top, there are navigation tabs: 'Item', 'Store', and 'Source', all set to 'All'. Below these are various filter and view options: 'Expiry Items', 'Item Stock by Store', 'Items', 'MOS', 'Overview', 'Purchase Orders Outstanding', 'Store Details', 'Stores', and 'Turnover'. The main content is divided into two sections. On the left, a table titled 'Stock on hand' lists various medical supplies with columns for 'Item', 'Unit Price', 'Stock', and 'Source'. On the right, a map titled 'Months of stock by Store' shows New Zealand with colored circles indicating stock levels at different locations like Auckland, Christchurch, and Wellington. A legend for the map shows color-coded ranges: red for < 1, yellow for 1-6, green for 6-12, and blue for 12+. Below the map is a 'Leaflet | © OpenStreetMap © CartoDB' attribution. At the bottom of the screenshot, there is a header for a table: '-- Select a single item --' followed by columns for 'Stores', 'Unit Price', 'AMC', 'Stock on Han', 'Qty 1', 'Batch 1', 'Expiry 1', 'Qty 2', 'Batch 2', 'Expiry 2', 'Qty 3', 'Batch 3', 'Expiry 3', and 'Qty 4'.

To use, select the msupply-table visualisation option:

The new options available in the **Display** section are:

▼ **Display**

**Show header**

To display table's header or not to display

**Show export button**

Display or hide the export to excel option

**Export button title**

The title of the export button

\* **Show export button** toggles display of the export button \* **Export button title** which allows customising of the export button text

And the option to link a cell to a variable is per field, so it can be specified as an override to select this for a single column only:

▼ **Override 1**

**Fields with name**

**Linked Variable**

Specify the name of a variable to update when this field is clicked
