

mSupply World Map

This is a custom panel which will need to be installed on your server. Contact mSupply support if this panel is not available to you. The world map displays points on a map, the size of which relate to a numerical value from your query. You can set the colour thresholds for each region and you can define clickable actions to update filter values based on the point clicked, as shown

To use, select the `msupply-worldmap` visualisation option:

There are a number of options available in the **Display** section:

* **Show export button** toggles display of the export button * **Export button title** which allows customising of the export button text

And the option to link a cell to a variable is per field, so it can be specified as an override to select this for a single column only:

Override 1

Fields with name

Item

Linked Variable

Specify the name of a variable to update when this field is clicked
